Anodyne Pain & Wellness Solutions, helping you to live your life... pain free.

A national brand is coming to Manchester to help people in greater St. Louis with customized care plans to improve their quality of life.

At Anodyne of Manchester, we effectively treat chronic pain without the use of opioids, while improving your function and mobility to get back to the activities that you enjoy most.

We treat the problem rather than masking it. We do not believe in providing temporary relief while the underlying problem can actually get worse over time, eventually leading to surgical procedures which, could have been avoided.

We create a wellness plan that addresses immediate and specific issues while creating a long-term plan to improve the health and well being of our patients by treating the actual problem, naturally.

Call to schedule your Complementary Consultation
